

Dear Presenter,

The Australian Centre for Geomechanics (ACG) is a not-for-profit mining research centre based at The University of Western Australia that seeks to advance mine safety through its geomechanics research projects, further education courses, publications and training products.

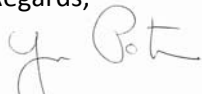

The ACG aims to improve the knowledge and skills of mining professionals and practitioners, and those studying in this area, by offering further education courses through our online facilities. A discussion document about our planned online courses is currently being prepared and is available on request. It is envisaged that this series of courses will potentially include 'block and sublevel caving' topics and may feature some of the presentations given at the ACG's Second International Symposium on Block and Sublevel Caving, as well as invited contributions from leading industry experts. It is intended that these courses will be accredited by The University of Western Australia, and possibly by other tertiary institutions, as well as being supported by assessment materials.

The ACG seeks your permission to film your presentation at the Second International Symposium on Block and Sublevel Caving. We undertake to invite you to review the footage of your presentation (prior to release) if it is to be used in any manner, including being part of the proposed online course.

Before granting us permission to film your presentation, you may wish to consider that you have the necessary approvals for us to film the content to be featured in your PowerPoint presentation(s). The Caving 2010 team is happy to omit specific slides or content from your presentation(s) if required.

Please do not hesitate to contact us if you have any queries regarding the above request. We look forward to hearing from you at your earliest convenience.

Regards,

Yves Potvin
Director
Australian Centre for Geomechanics

For event updates please visit the website www.caving2010.com.

By signing this document, I give permission for myself and my presentation to be filmed at the ACG's Second International Symposium on Block and Sublevel Caving being held 20-22 April 2010 in Perth, Western Australia.
